ABSTRACT:

PROBLEM TO BE SOLVED: To reduce the load of a network and to improve security in a document distribution/printing system applied between plural terminal equipments connected to the same network.

SOLUTION: The document distribution/printing system has a registering means for registering document data to be distributed in a shared printer 3 from a distribution source terminal equipment 1 correspondingly to document identification data, a notification means for notifying a distributed destination terminal equipment 2 of the registration of the document data in the shared printer 3 and the document identification data when the registration succeeds, a document data transmission means for transmitting the document data to the equipment 2 when the registration fails, a printing request means for allowing the equipment 2 which is notified of the registration of the document data in the printer 3 to request the printing of the registered document data to the printer 3 by specifying the document identification data, a retrieving means for allowing the printer 3 to retrieve the document data on the basis of the document identification data, and a printing engine for printing the retrieved document data in the printer 3.
